B Paired evaluation protocol

1 Future discrimination

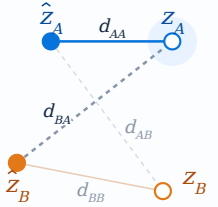

Hold the prediction fixed; compare the two true futures.

$d_{AA} < d_{AB}$; $d_{BB} < d_{BA}$

2 History benefit

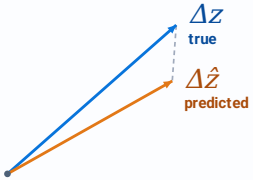

Hold the true future fixed; compare predictions from A and B.

$d_{AA} < d_{BA}$; $d_{BB} < d_{AB}$

3 Response fidelity

The predicted response should match the true response.

$$\text{NRE} = \frac{\sum_i \|\Delta \hat{z}_i - \Delta z_i\|^2}{\sum_i \|\Delta z_i\|^2}$$

Key Prediction · True future · Matched condition · Other condition · Fixed for comparison · Shorter distance → lower error
